LAB Report 4/14/16 Effect of Temperature on Solubility of a Salt Introduction The purpose of this experiment is to study the effect of temperature on solubility. Solubility refers to the ability of a given amount of a solute to dissolve in a solvent. Normally the amount of substance that can be dissolved in 100ml of a given solvent is at room temperature (20°C). Lab Report: Effects Of Temperature On Solubility Of A Salt ... Solubility of a solid in a liquid increases on increasing the temperature. Explanation: On increasing the temperature the solubility of a solid in a liquid increases, as on increasing the temperature the kinetic energy of the molecules of the solvent increases which causes more space in the particles of the solvent making the solute particles to break more rapidly. Answer the lab question ("what is the effect of ... The Virtual Lab is an online simulation of a chemistry lab

The solubility of a given solute in a given solvent typically depends on temperature. Many salts show a large increase in solubility with temperature. Some solutes exhibit solubility that is fairly independent of temperature. A few, such as cerium(III) sulfate, become less soluble in water as temperature increases. Factors Affecting Solubility | Boundless Chemistry Temperature & Solubility Lab.

Hypothesis. Name INTRODUCTION. The amount of solute that dissolves in a solvent depends on several factors. You have all had experience with making solutions like Kool-Aid (, lemonade, and saltwater. You know that stirring or shaking the solution will help the solute to dissolve faster in the water (solvent).
